## POWERTEX Chain Block PCB-S2

User Manual

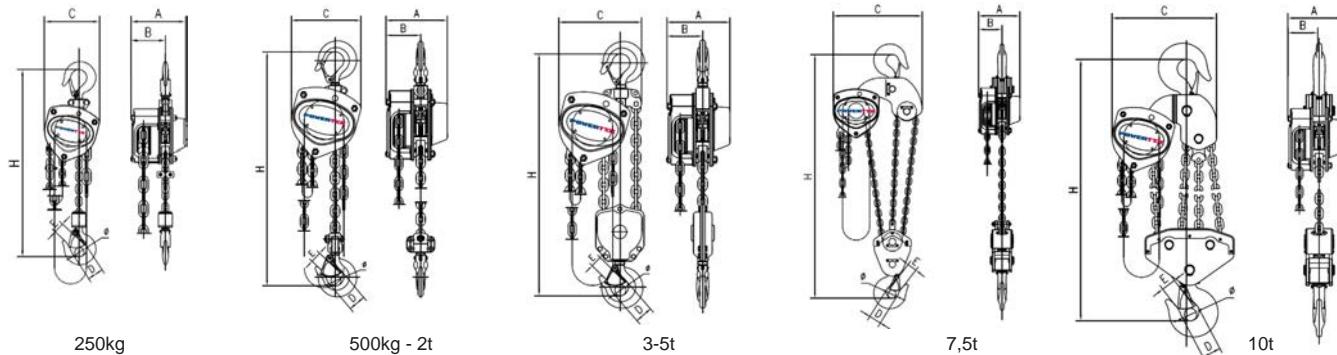

# POWERTEX Chain Block PCB-S2 0,25 – 10 tonnes

## Instruction for use (GB) (Original instructions)

Read through these user instructions carefully before using the chain block. Improper operation may lead to hazardous situations!

### General safety provisions

- Only to be used by trained operator.
- Do not use in explosive or corrosive environment.
- Temperature range: -10°C up to +50°C.
- Check the function of the chain block before use. See "Daily checks" on page 3.
- Full function of the brake system can only be secured at a minimum load of 30 kg for capacities (WLL) up to 1 ton, and for capacities (WLL) above 1 ton, the minimum load to be greater than 3% of the rated capacity (WLL).
- Do not exceed the maximum load.
- Handle the chain block with care. Do not throw the block about or let it fall to the ground.
- Do not use the chain block for welding work where it is exposed to welding spatter or current.
- The chain block must not be used for lifting persons.

Safety factor: 4:1.

Dynamic test coefficient: WLL x 1,5.

Generally according to EN 13157.

## Function

The load hook is raised or lowered by pulling on the hand chain.

The load will remain where it is when the hand chain is released because of the effective reaction brake.

Max. hand force need to be respected to avoid overloading of the hoist.

The Over Load Protection (OLP) versions are additionally equipped with an overload protection device that will limit the force that can be applied using the hand chain.

If the OLP device is activated the hand chain will rotate but the hoist will not continue to lift, only lowering is possible.

The overload protection device is adjusted in the factory to approx. 1,3 x WLL and the device normally don't need to be adjusted.

## Suspension of chain block

Suspend the block from an eye, shackle, girder trolley etc. with sufficient load capacity. With the chain tightened, both hooks must be vertically aligned.

**NB!** No bending stresses may be applied to block, hooks or load chain.

## Raising/lowering

Only use straps and slings of sufficient load capacity. Check that the load is not anchored to the floor/ground or is otherwise fixed before making the lift. Ensure that the load chain hangs vertically and has no kinks. The hand chain must also be in good condition and easily accessible. The load is raised or lowered by pulling the hand chain in either direction.

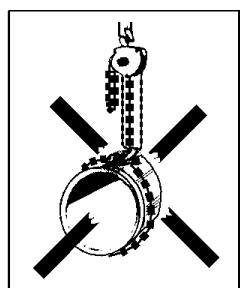

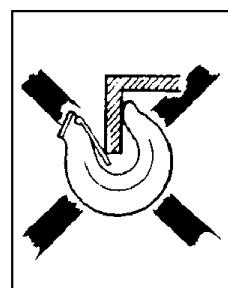

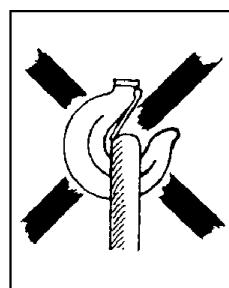

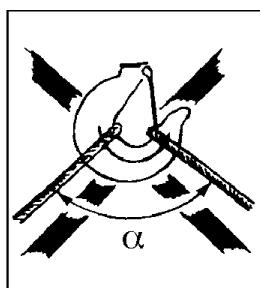

**Warning:** Do not overload the brake by prolonged lowering. It may cause brake function to fail.

## Warning:

- Only hand power from a single person is permitted on the hand chain. If the chain feels too heavy, use a bigger chain block or reduce the load.
- Make sure no-one stands beneath a hanging load.
- Do not step onto a hanging load.
- Do not raise or lower so far that the load hook hits the block housing.
- The chain block must not be used for pulling loads.
- The block must not be subjected to dynamic stresses, for example where a load connected to the block is launched from a height.
- Do not leave a block with a suspended load unattended.

## Attachment of loads

Check the equipment before use. Improper attachment of loads can be highly dangerous (see Figs. 2 a – 2 e).

**Fig 2 a**

The sling is applying load to the hook tip

**Fig 2 b**

α max. 60°

**Fig 2 c**

Hook latch obstructed

**Fig 2 d**

**Fig 2 e**

Load chain must not be used as a sling

## Multiple lifting

Multiple lifting entails special risks. This is when two or perhaps more hoists are used simultaneously for the same load. Danger to persons and material damage can arise due to dynamic stresses and uneven load distribution causing individual hoists to become overloaded. A competent person with experience in multiple lifting must therefore supervise this type of lifting tasks.

The total weight of the target object and its load distribution must be known or calculated.

For a variety of reasons, the centre of gravity can be difficult to determine, and thus so will the distribution of the load each chain hoist must bear.

In cases where heavy, bulky loads must be handled and it is not possible to estimate all factors correctly, the working load limit (WLL) of each chain hoist must be reduced by at least 25%.

## Daily checks

After every working day on which the chain block has been used, the following should be checked:

- Is the chain block deformed or otherwise damaged? Are any parts missing?
- Is any deformation or other damage visible on the suspension device (eye, shackle, bolt, trolley etc.)?
- Are the hooks intact or have any hooks opened? Are the hook latches correct and functional?
- Wipe down the chain block and oil the load chain as required.
- The load chain must be undamaged, i.e. no signs of wear and no deformed or otherwise damaged links.
- The load chain must not be kinked or twisted. With two-fall or multi-fall chain blocks there is a risk of the chain twisting if the bottom hook assembly ends up looped through the chain sling – usually during refitting or moving the chain block between work stations. See Fig 3.
- The hand chain must also be in good condition.
- The brake function must be intact.

In the event of faults or failures, the block must be repaired and carefully checked by a specialist before reuse.

### Continuous maintenance - lubrication

Oil the hook latches and bearings. Grease the pawl and ratchet and also the gear. Lubrication must be sparingly and carefully applied so no grease gets on the brake disk. Oil the load chain for longer life.

### Periodic checks

Periodic checks are normally carried out yearly to detect and remedy any faults. If required (e.g. high frequency of use), more frequent checks may be carried out. See "Checklist for periodic checks". Measure hooks and chain to detect any changes in shape.

#### Checks on load hook (see Fig. 4 and Table 1)

Opening dimension C on the hooks is important. A hook with too large a maximum dimension has been exposed to overloading or overheating. It therefore does not have the necessary load capacity. The hooks may also have been exposed to long-term wear (dimension K).

Hooks must be discarded and replaced if:

- The maximum C value is exceeded (according to Table 1)
- The minimum K value falls short (according to Table 1)
- The hook shows signs of cracking
- The hook is deformed or otherwise damaged

Defective hooks must be replaced before using the chain block again.

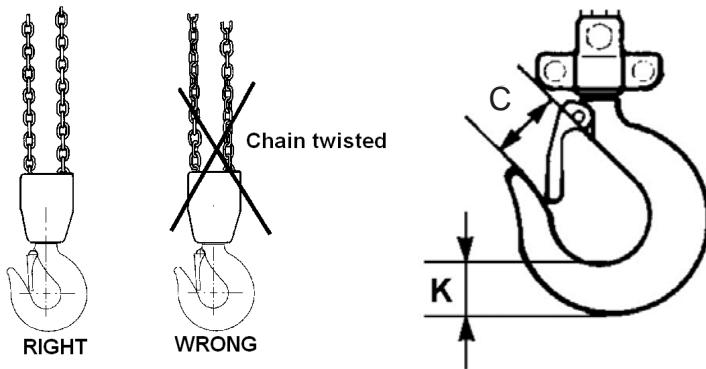

Fig. 3 The chain must not be twisted

Fig. 4 Load hook

Table 1 Load hook

WLL t	0,25	0,5	1	2	3	5	7,5	10
Model	PCB-S2

Dimension K min mm	13,5	17,1	22,5	30,2	35,1	40,0	59	55,8

#### Checks on load chain (see Fig. 5 and Table 2)

Inspect the load chain over its whole length to detect any deformed or otherwise damaged links. Make a check measurement of suspect links. Measure the worn areas Also, every 300 mm (normally), make check measurements of the internal length of 5 links (pitch dimension 5xP – according to Table 2).

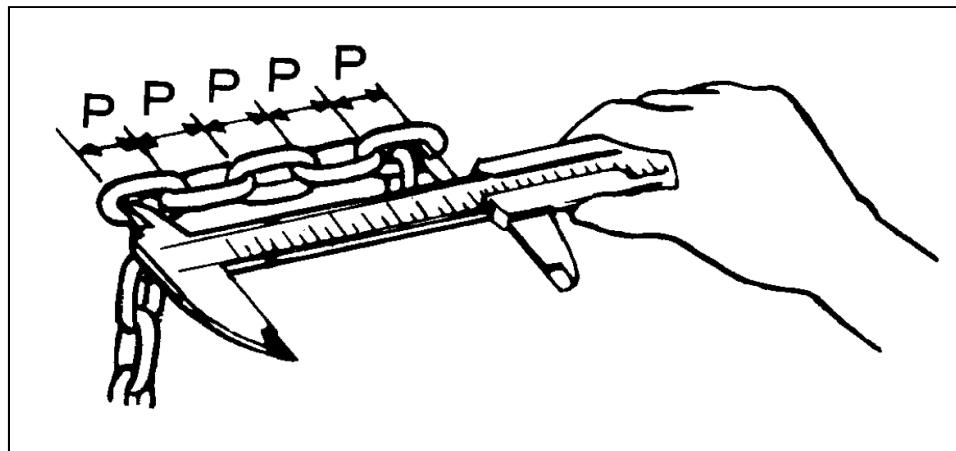

Fig 5 Checking load chain dimensions

Table 2 Load chain

Max. load t	0,25	0,5	1	2	3	5	7,5	10
Model	PCB-S2							
Link diameter nominal mm	4,0	5,0	6,3	8,0	7,1	9,0	9,0	9,0
Link diameter min. mm	3,6	4,5	5,7	7,2	6,4	8,1	8,1	8,1
Pitch dimension (5xP) nominal mm	60,0	75,0	95,0	120,0	105,0	135,0	135,0	135,0
Pitch dimension (5xP) max. mm	61,8	77,2	98,0	123,5	108,1	139,0	139,0	139,0

The load chain must be discarded and replaced if:

- cracks are detected on any link
- any link is deformed or otherwise damaged
- The minimum value of any link's diameter falls short
- the maximum value of the pitch dimension is exceeded at any point
- the chain is damaged by overheating or has been affected by weld splatter

Load chains must **not** be repaired – they must be replaced by new chain. If it is desired to lengthen the chain, it must be replaced by a new and longer chain.

Replacement of the chain shall be performed professionally by an authorized repairer and the chain must meet the requirements stated in the standard EN 818-7, Grade T from the following manufacturers: Chaineries Limousines, Pewag, Thiele or Rud.

## Repairs

The chain block must not be modified. Repairs must be carried out by specialists. Damaged parts must only be replaced with original Powertex spare parts. Order them through your dealer.

## Declaration of conformity

# POWERTEX kædetalje PCB-S2 0,25 - 10 ton

## Brugsanvisning (DK)

Læs denne brugsanvisning, før kædetaljen tages i brug. Forkert brug kan medføre fare!

### Generelle sikkerhedsanvisninger

- Må kun betjenes af uddannet operatør.
- Må ikke anvendes i eksplasive eller ætsende miljøer.
- Arbejdstemperatur: -10°C op til +50°C.
- Kontrollér kædetaljens funktion før brug. Se: "Daglig kontrol" på side 7.
- Belast ikke med mere end maks.-lasten.
- Fuld funktion af bremsesystemet kan kun sikres ved en minimum belastning på 30 kg, for kapaciteter (WLL) op til 1 ton, og for kapaciteter (WLL) over 1 ton, skal minimum belastningen være større end 3% af den nominelle kapacitet (WLL).
- Håndtér kædetaljen med forsigtighed. Taljen må ikke kastes med eller slæbes.
- Brug ikke kædetaljen ved svejsearbejder, hvor den kan blive utsat for svejsestænk eller svejsestrøm.
- Kædetaljen må ikke bruges til personløft.

Dynamisk test-koefficient: WLL x 1,5.

Generelt i henhold til EN 13157.

## Funktion

Lastkrogen løftes eller sænkes ved at trække i styrekæden.

Takket være en effektiv lasttrykbremse bliver lasten hængende, selvom man slipper styrekæden.

Maks. håndkraft skal respekteres for at undgå overbelastning af hejsen.

OLP-versionerne (Overlastsikring) er desuden udstyret med en overlastsikring, der begrænser den kraft, der kan påføres ved hjælp af håndkæden.

Hvis OLP-enheden er aktiveret, vil håndkæden rotere, men taljen fortsætter ikke med at løfte, kun sænkning er mulig.

Overlastsikringen justeres fra fabrikken til ca. 1,3 x WLL og enheden skal normalt ikke justeres.

## Ophængning af kædetaljen

Taljen ophænges i øsken, sjækkel, løbekat på bjælke osv. med tilstrækkelig bæreevne. Når kæden er strammet op, skal de to kroge være vertikalt i linje med hinanden.

**OBS!** Hverken talje, kroge eller lastkæde må udsættes for bøjebelastning.

## Løft/sænkning

Brug kun stopper og lokker med tilstrækkelig bæreevne. Kontrollér, at lasten ikke er forankret i gulvet/jorden eller på anden vis har sat sig fast, før den løftes. Sørg for, at lastkæden hænger vertikalt og ikke har dannet kinker. Styrekæden skal også sidde ordentligt og lettligængeligt. Lasten løftes hhv. sænkes, når man trækker i styrekæden i den relevante side.

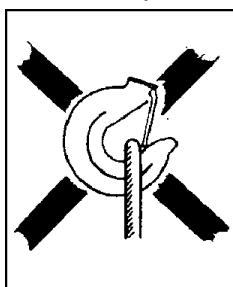

Overbelast ikke bremsen ved langvarig sænkning. Det kan medføre, at bremsefunktionen mislykkes

## Advarsel!

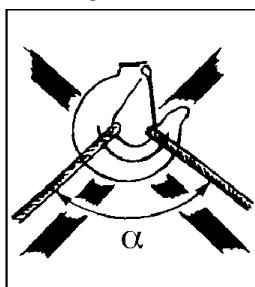

- Styrekæden må kun betjenes ved håndkraft! Hvis det føles for tungt, skal man vælge en større kædetalje eller reducere lasten!
- Sørg for, at der ikke opholder sig personer under hængende last!
- Stå ikke på hængende last!
- Der må ikke løftes og sænkes for langt, da lastkrogen i så fald kan risikere at ramme taljehuset!
- Kædetaljen må ikke bruges til træk af last.
- Taljen må ikke udsættes for dynamiske påvirkninger, f.eks. ved at en last, der er fastgjort til taljen, puffes ud oppefra!
- Efterlad ikke taljen med hængende last uden opsyn!
- 

## Fastgørelse af last

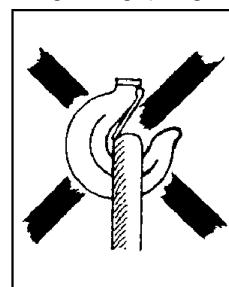

Kontrollér udstyret før brug. Forkert fastgørelse af last kan være meget farligt (se fig. 2 a – 2 e).

**Fig 2 e**  
Lastkæden må ikke

## Samløft

Samløft medfører særlige risici. Det er, når to eller evt. flere taljer bruges samtidigt til den samme last. Der kan opstå fare for personer og risiko for materielle skader som følge af dynamiske påvirkninger og ujævn lastfordeling, så en (eller flere) af taljerne bliver overbelastet. Samløft skal derfor foregå under ledelse af en kvalificeret person, der har den fornødne erfaring.

Den totale vægt af målobjektet og dets last fordeling skal være kendt eller beregnes.

Af forskellige grunde kan tyngdepunktet være vanskeligt at afgøre, og dermed også fordelingen af belastningen hver kædetalje skal bære. I tilfælde, hvor tunge, uhåndterlige byrder skal håndteres, og det er ikke muligt at estimere alle faktorer korrekt, skal hver kædetaljes maksimale WLL reduceres med mindst 25%.

## Daglig kontrol

Efter hver arbejdsdag, hvor kædetaljen har været anvendt, skal følgende kontrolleres:

- Er kædetaljen blevet deform, eller har den fået andre skader? Mangler der nogen dele?
- Kan man se deformationer eller andre skader på ophægningsanordningerne (øsken, sjækkel, bolt, løbekat osv.)?
- Er krogene intakte, eller er en af krogene åbnet? Er krogenes låsepaler fejlfri og funktionsdygtige?
- Kædetaljen aftørres og lastkæden smøres ved behov.
- Lastkæden skal være intakt, dvs. den må ikke være slidt eller have deformé eller på anden vis beskadigede kædeleder.
- Lastkæden må ikke have kinker eller være snoet. Ved 2- eller flerparts taljebrug er der risiko for, at kæden kan blive snoet, ved at underblokken kommer til at smitte gennem kædesløjfen – typisk ifm. ommontering eller flytning af kædetaljen mellem forskellige arbejdssteder. Se fig. 3.
- Styrekæden skal også sidde ordentligt.
- Bremsefunktionen skal være intakt.

I tilfælde af fejl eller defekter skal taljen repareres og omhyggeligt kontrolleres af en tekniker, før den tages i brug igen.

## Løbende vedligeholdelse – smøring

Smør krogenes låsepale og lejer. Låsehage og -hjul samt gear smøres med fedt. Der skal smøres sparsomt og forsigtigt, så der ikke kommer smøremiddel på bremseskiven. Smør lastkæden – det forlænger dens levetid.

## Regelmæssig kontrol

Der skal foretages regelmæssig kontrol, som hovedregel en gang om året, så eventuelle dysfunktioner kan blive opdaget og afhjulpet. Ved behov (f.eks. hvis brugsfrekvensen er høj) udføres kontrollen oftere. Se "Tjekliste for regelmæssig kontrol". Kroge og kæde måles for at kontrollere for eventuelle formændringer.

### Kontrol af lastkrog (se fig. 4 og tabel 1)

Krogenes åbningsmål C er vigtigt. En krog, hvis maks.-mål overskrides, har været utsat for overbelastning eller opvarmning. Den har derfor ikke tilstrækkelig bæreevne. Krogene kan også have været utsat for langvarig slitage (mål K).

En krog skal kasseres og udskiftes med en ny, hvis:

- C-målets maks.-værdi overskrides (jf. tabel 1)
- Den angivne minimumsværdi for K-målet ikke overholdes (jf. tabel 1)
- Krogen har revner
- Krogen er deform eller på anden vis beskadiget

En defekt krog skal udskiftes, før kædetalen tages i brug igen!

### Kontrol af lastkæde (se fig. 5 og tabel 2)

Efterse lastkæden i hele dens længde for at opdage evt. deformé eller på anden vis beskadigede kædeled. Suspekte kædeled skal kontrolmåles. Mål ved slidstederne. Kontrolmål også, for hver 300 mm (normalt), den indvendige længde af 5 kædeled (pitch 5xP, jf. tabel 2).

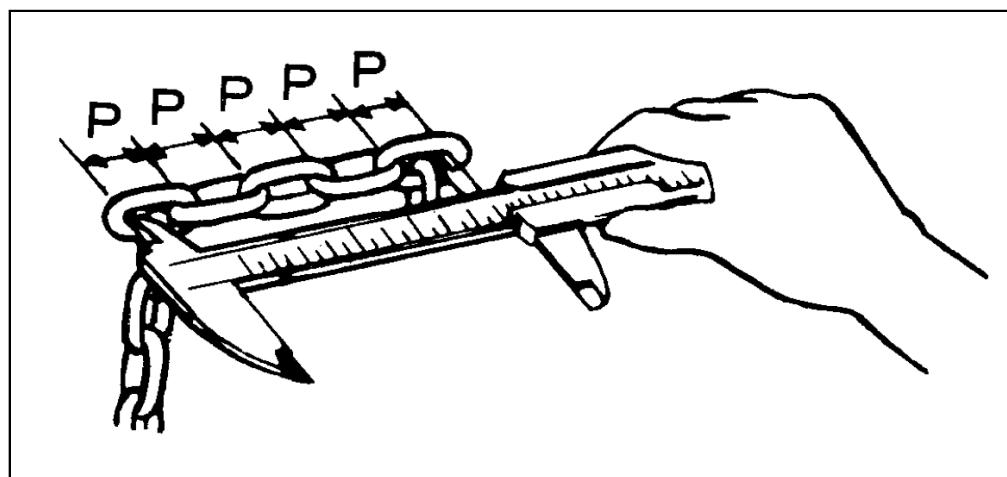

Fig. 5 Kontrolmåling af lastkæde

**Tabel 2** Lastkæde

Maks. last ton	0,25	0,5	1	2	3	5	7,5	10

Indvendig længde (5xP) maks. mm	61,8	77,2	98,0	123,5	108,1	139,0	139,0	139,0

Lastkæden skal kasseres og udskiftes med en ny, hvis:

- der konstateres revner i et kædeled
- et kædeled er deformt eller på anden vis beskadiget
- den angivne min.-værdi for et kædeleds diameter ikke overholdes
- den maksimale pitch-værdi overskrides et eller flere steder
- kæden er beskadiget pga. opvarmning, eller hvis der er kommet svejsestænk på den

Lastkæden må ikke repareres – den skal udskiftes med en ny originalkæde. Hvis man ønsker en længere kæde, skal kæden udskiftes med en ny kæde, der er længere.

Udskiftning af kæden skal udføre professionelt af en autoriseret reparatør og kæden skal opfylde kravene i standarden EN 818-7, klasse T fra følgende producenter: Chaineries Limousines, Pewag, Thiele eller Rud.

### Reparationer

Kædetalen må ikke ombygges. Reparationer skal udføres af en tekniker. Udskift kun beskadigede dele med originale Powertex reservedele. Bestilles hos forhandleren.

### Tjekliste for regelmæssig kontrol (normalt årligt – oftere ved behov)

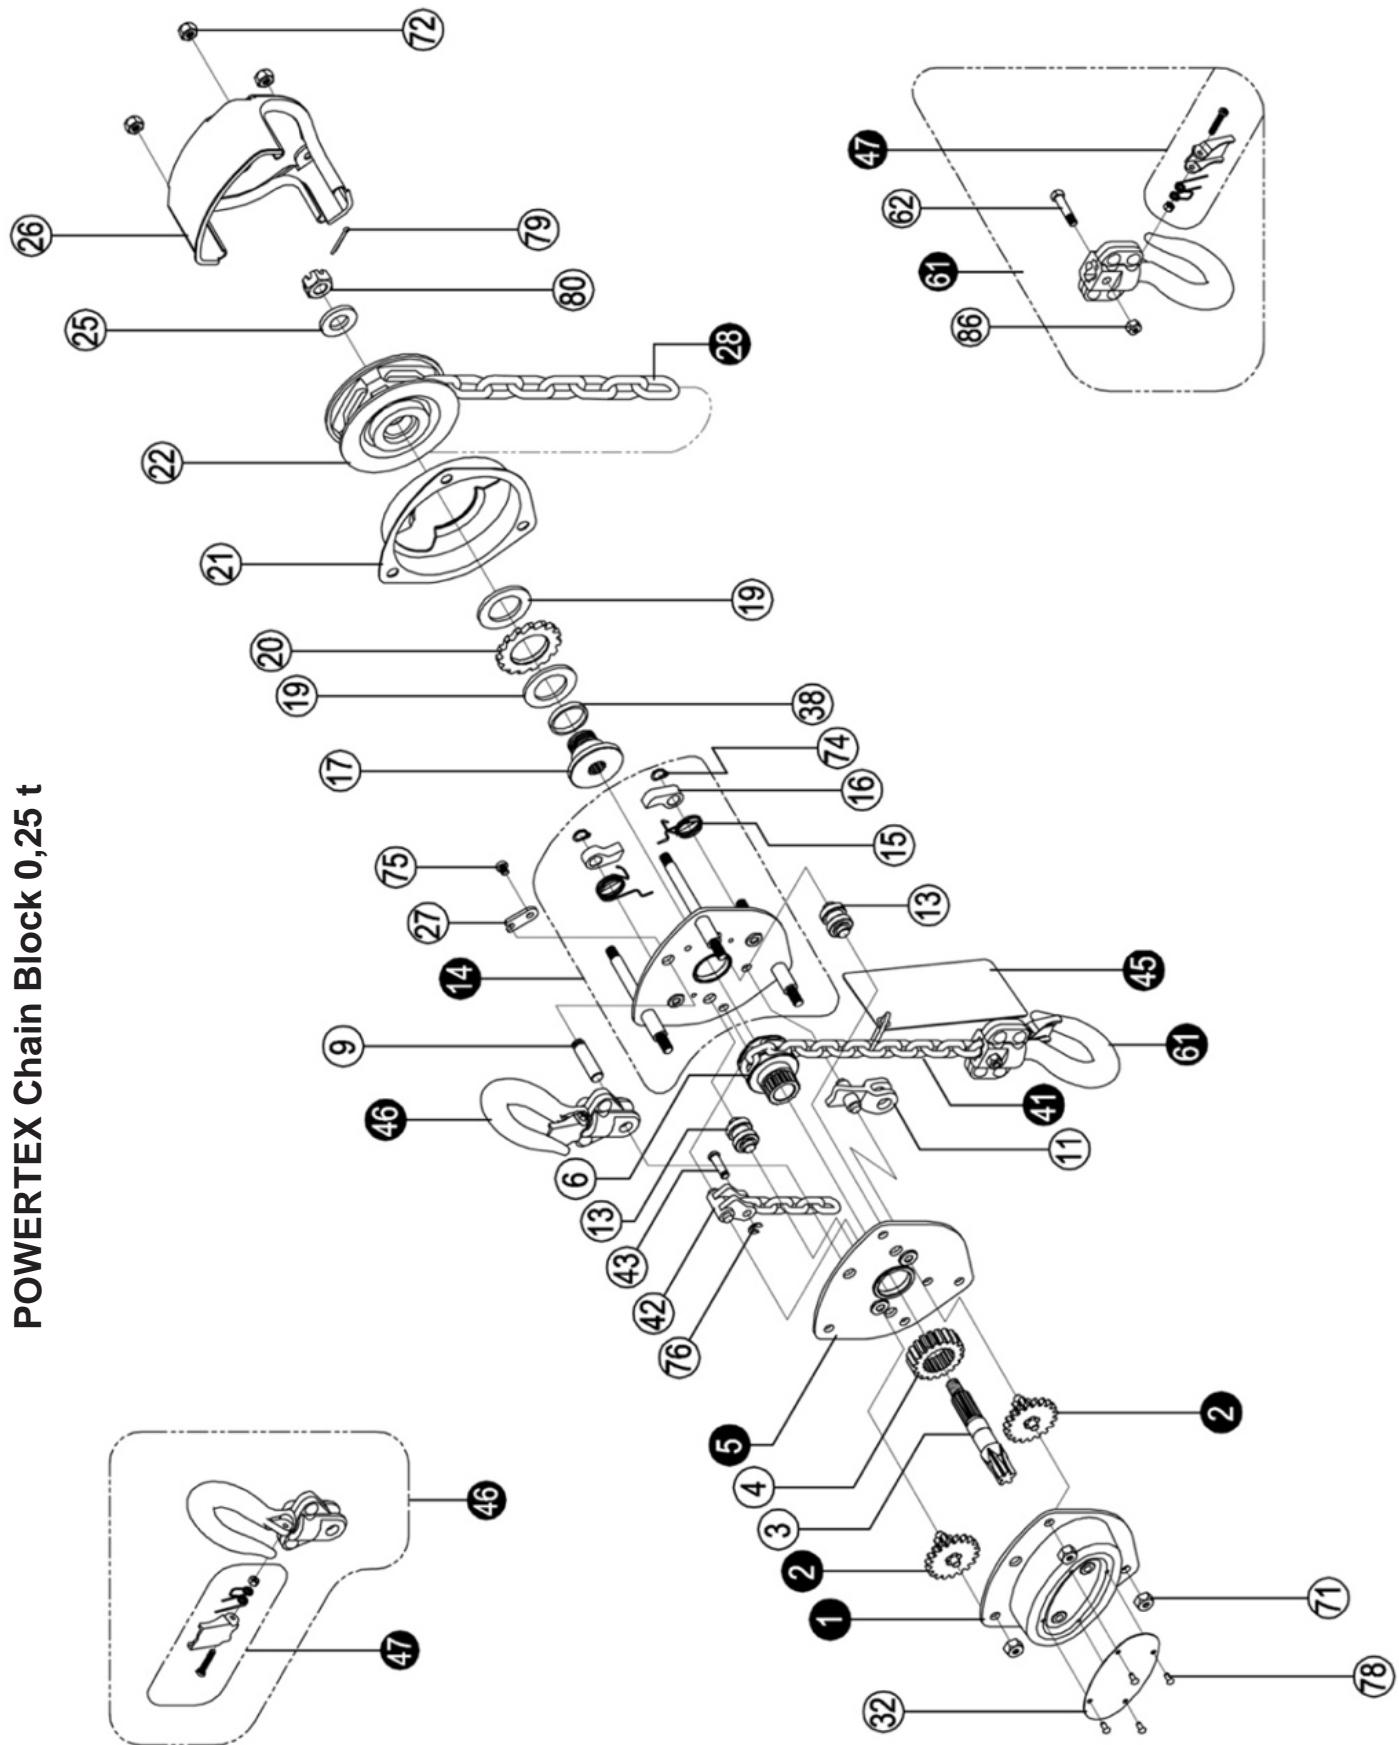

Dagligt	Årligt	Kontrolpunkter	Kontrolmetode	Bemærk
<b>Mærkning</b>				
X	X	Typeskilt	Visuelt	Hvis typeskiltet er svært at læse, skal det udskiftes
<b>Funktion</b>				
X	X	Løfte- og sækkefunktion	Test uden last	Der skal høres en blid, klikkende lyd
-	X	Løfte- og sækkefunktion	Test med mærke-lasten for min. 300 mm	Kædehjul og kæde fungerer fint sammen. Bremsen fungerer. Strekæde-håndkraften er jævn og ikke for stor
<b>Krog</b>				
X	- X	Krogenes åbning	Visuelt Mål	Ser normalt ud Se fig 4 og tabel 1
X	X	Deformation	Visuelt	Ingen synlig deformation
X	X	Krogenes lejer	Visuelt	Intet unormalt slør
X	- X	Slitage, revner, deformation og korrosion	Visuelt Mål	Ingen synlige skader Se fig. 4 og tabel 1
X	X	Palkrog	Visuelt, test	Fungerer, fjederen ubeskadiget.
<b>Lastkæde</b>				
X	- X	Indvendig længde	Visuelt Mål	Ser normal ud. Foretag måling i tvivlstilfælde Se fig. 5 og tabel 2
X	- X	Slitage	Visuelt Mål	Ser fejlfri ud. Foretag måling i tvivlstilfælde Se fig. 5 og tabel 2
X	X	Deformation	Visuelt	Ingen deformation. Foretag måling i tvivlstilfælde
X	X	Revner m.m.	Visuelt	Ingen revner
X	X	Rust	Visuelt	Ingen rust
<b>Hus</b>				
X	X	Huset	Visuelt	Ingen deformation og ingen rust
X	X	Gearhus	Visuelt	Ingen deformation
-	X	Gear	Visuelt efter demontering	Ingen alvorlig slitage eller brud
-	X	Kædehjul	Visuelt efter demontering	Ingen alvorlig slitage eller revner. Ingen brud eller deformation
-	X	Strekæde-hjul	Visuelt	Ingen alvorlig slitage eller revner. Ingen brud eller deformationer
-	X	Lejer	Visuelt, test	Uden skader, fungerer let
<b>Skruer</b>				
X	X	Skruer, møtrikker, nitter, splitter m.v.	Visuelt	Må ikke mangle. Løse skruer m.v. strammes. Udskiftes ved behov
<b>Bremse</b>				
-	X	Bremseskive	Visuelt	Slidt bremseskive udskiftes
-	X	Bremseskrue	Visuelt	Ingen alvorlig slitage
-	X	Låsehage og -hjul	Visuelt	Udskift slidte dele. Smøres forsigtigt med fedt.

#### **POWERTEX Chain Block PCB-S2 – Spare parts 0,25 t**

When ordering spare parts, specify model, WLL, part number and the quantity needed.

When ordering chain, also specify lifting height.

If the load chain has been damaged or worn out the load sheave probably has to be replaced.
